

ACME CORP CLOUD SECURITY STANDARDS (v2)

Section 4.1: S3 Bucket Configuration

All S3 buckets used for 'Production' workloads must adhere to the following strict controls:

1. Encryption: Server-Side Encryption (SSE) must be enabled using AES-256 (SSE-S3).
2. Versioning: Bucket Versioning must be explicitly ENABLED to prevent accidental data loss.
3. Public Access: All 'Block Public Access' settings must be set to TRUE.

Section 4.2: IAM Users

All IAM users with console access must have Multi-Factor Authentication (MFA) enabled.
